Preparation of Wrapper Commands for Compiler

Put the following wrapper commands in /home/users/\$USER/compiler/ccuv/intel-11.1.

mpicc

```
#!/usr/bin/perl
#
use strict;
use warnings;
my @extra;
my $compiler = "/opt/sgi/mpt/mpt-2.05/bin/mpicc";
for (my $i = 0; $i < scalar(@ARGV); ++$i) {
    if ($ARGV[$i] eq "-o") {
        @extra = ("-WI,--disable-new-dtags",
                  "-WI,-rpath,/opt/intel/Compiler/11.1/080/lib/intel64",
                  "-WI,-rpath,/opt/intel/Compiler/11.1/080/mkl/lib/em64t");
    }
}
system($compiler, @extra, @ARGV);

```

mpif90

```
#!/usr/bin/perl
#
use strict;
use warnings;
my @extra;
my $compiler = "/opt/sgi/mpt/mpt-2.05/bin/mpif90";

Procedure of Compiling

```

# Delete old files.
if (-d $AMBERHOME) then
    mv $AMBERHOME $work/amber12-erase
    rm -rf $work/amber12-erase &
endif

cd $work
