

## Molpro 2022.3.0 (mvapich)

### Webpage

<https://www.molpro.net/>

### Version

2022.3.0

### Build Environment

- GCC 10.3.1 (gcc-toolset-10)
- GCC 11.2.1 (gcc-toolset-11)
- MVAPICH 2.3.7
- openblas 0.3.15 (of Rocky Linux 8)

### Files Required

- molpro-2022.3.0.tar.gz
- ga-5.8.2.tar.gz
- work.patch
- patch-argos-bininput.F
- patch-cic-ltfFortranInt.h
- patch-common\_modules-common\_cconf1
  - Patch files are copied to `/apl/molpro/2022.3.0/patches`.
- token

### Build Procedure

```
#!/bin/sh

make install
```

## Notes

- Unlike [hpc-x \(openmpi\) version](#), this version works fine when disk option is active.
  - HPC-X 2.13.1, HPC-X 2.11, or Intel MPI 2021.7.1 version hangs when disk option is enabled. (In case of IMPI 2021.7.1, job freezes immediately after start running. In case of HPC-X, job freezes randomly(?).)
    - In case of HPC-X, job often freezes in the libhcoll routine. However, disabling libhcoll (add "-mca coll\_hcoll\_enable 0" to mpirun) did not help.
  - In case of Open MPI 3.1.6, disk options works without problem. However, another error message is constantly shown. (This probably does not affect results, though.)
  - Intel MPI 2021.5.1, 2021.8.0, and 2021.9.0 are free from this issue. The problem occurs only when runtime library of Intel MPI 2021.7.1 is used.
  - If you don't use disk option (add "--ga-impl ga" option to molpro), those freezes do not happen even when those problematic versions are employed.
